NUKI BRIDGE
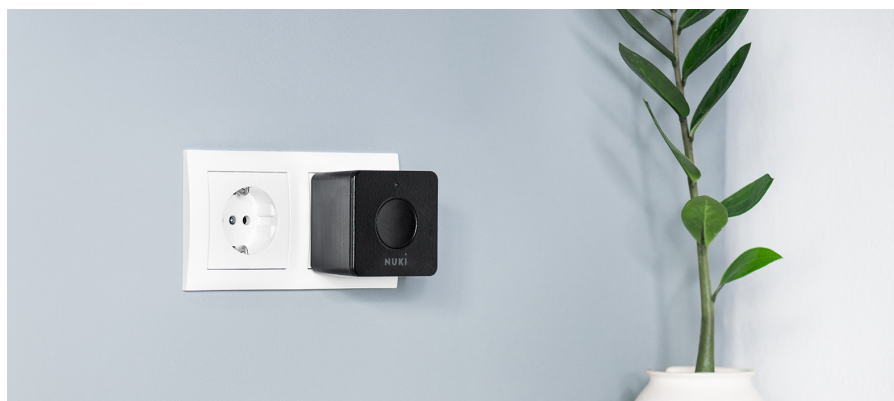

DATA SHEET

STAY CONNECTED

The Nuki Bridge connects the Nuki Smart Lock to the Internet so that it can also be controlled remotely. Thanks to the Bridge, Smart Lock users have full access to their electronic door lock while they're on the move. The Nuki Bridge is also the prerequisite for coupling the Smart Lock with countless Smart Home systems such as Amazon Alexa, IFTTT or Airbnb and for using Nuki Web.

BENEFITS

- ⌐ Connects the Nuki Smart Lock to the Internet so it can be controlled remotely
- ⌐ Enables integration with a wide range of Smart Home systems which make life easier
- ⌐ Create and manage new users and keypad entry codes remotely and on the go
- ⌐ Access to door status and lock log from anywhere, anytime
- ⌐ Comfortable control of the Smart Lock from a computer via Nuki Web

NUKI SMART LOCK 2.0

ONE SMART LOCK FOR ALL

The Nuki Smart Lock transforms existing door locks into digital access systems and turns your smartphone into an intelligent key. No modifications are required before fitting a Nuki. The electronic door lock is simply mounted on top of the existing cylinder on the inside of the door and can even be removed without leaving any traces if required, so it is also ideally suited to rental properties.

YOUR ADVANTAGES

- Replaces the physical key with a smartphone app
- Automatically locks the door at specified times
- Thanks to the new door sensor, you will always be able to see whether the door is also actually closed
- Maximum flexibility through the simultaneous assignment of up to 200 individually-adjustable access authorisations
- With the optional accessories (Nuki Keypad, Nuki Fob), the Nuki Smart Lock can also be used by people who don't have a smartphone
- The most flexible Smart Lock in Europe when it comes to integration into existing smart home systems (in conjunction with the Nuki Bridge)
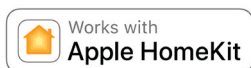

BRAND NEW

APPLE HOMEKIT

Apple HomeKit integration means that the Smart Lock can now be controlled with Siri, managed with the Apple Home app and incorporated in HomeKit Scenes.

NUKI DOOR SENSOR

The new door sensor allows you to see not only the status of the lock cylinder, but also of the door.
